Forehead Lift - Center of Aesthetic Surgery

Our experts in facial plastic surgery will strategically place incisions behind the hairline, and will use endoscopic equipment to lift the tissue of the forehead and brow area. Once the tissue has been re-positioned and fixed at a higher level, the incisions are closed. Risks include: infection, irritation, and scarring.

Forehead/Brow Lift - Specialty Aesthetic Surgery

If the forehead must be reshaped, to fill out a ridge or concavity, your surgeon will use a synthetic material to create the desired more rounded shape. Due to the location of the incision, forehead contouring is often done in conjunction with a brow lift or hairline restoration. Deep sutures will dissolve naturally while external sutures will be removed at a follow-up appointment five days following surgery.

Forehead Contouring, Reshaping and Reduction Surgery, San ...

The principle of dynamic muscular activity governs the interplay between agonist and antagonist functions of facial musculature, and applies for various aesthetic manifestations, such as brow position, shape and height, eyelid position, jawline definition and contour, and possibly forehead height and shape. 1 First proposed by Isse in 1994, 2 this principle served a fundamental role and was the rationale for endoscopic forehead lift: weakening through myotomy, the primary brow depressors, ie ...

Forehead Lift Using Botulinum Toxin | Aesthetic Surgery ...

In our practice, our plastic surgeons predominantly perform Endoscopic forehead and brow lifts, due to the small incisions that are concealed behind the hairline. This technique is performed with telescopes and magnified vision, with minimal bleeding, and minimal recovery time.
