data warehouse is never really a completed project. Every phase of a data warehouse project has a start and an end, but the data warehouse will never go to a stable end state and is therefore an ongoing process. Furthermore, the concept of software refactoring, which is common in agile software development, requires special treatment in a data warehouse because new iterations of the data model invalidate the historical data based on a prior data model. As a result,

Agile Methods and Data Warehousing (2016 update)

At the beginning of a project, during Iteration 0 (see Figure 1), you want to do some initial architecture modeling to identify a potential vision for how your team will build the data warehouse. As Agile Model Driven Development (AMDD) suggests, you do not need to create a comprehensive, detailed model up front, you only need a high-level vision at the beginning of the project and the details can be identified on a just-in-time (JIT) basis via model storming. Sometimes a simple whiteboard ...
