Artificial Nutrition And Support In

Artificial nutrition is the delivery of a patient's nutritional support in a fashion that does not require the patient to chew and swallow. This can be given with total parenteral nutrition (TPN) or through a nasogastric tube (NG tube) or gastrostomy tube (G-tube or PEG tube).

Benefits and Risks of Artificial Nutrition or Hydration

Artificial nutrition and hydration is a medical treatment, with intended beneficial effects but many side effects and complications attached to its use. Decisions about its use need to be based on a dispassionate look at what, if any, benefits will occur, what side effects and burdens are likely to occur, and what the individuals' and families' goals are for the treatment.
