The study of electrical contacts requires knowledge of physics, chemistry, mechanical engineering, electrical engineering, materials science, and environmental science. It also requires a broad applications knowledge; contacts can be found in electronic circuits that may carry currents of less than 10–6 A and also in power circuits that may carry currents of greater than 106 A.

Electrical Contacts - GBV

An electrical contact is an electrical circuit component found in electrical switches, relays, connectors and circuit breakers. Each contact is a piece of electrically conductive material, typically metal. When a pair of contacts touch, they can pass an electrical current with a certain contact resistance, dependent on surface structure, surface chemistry and contact time; when the pair is separated by an insulating gap, then the pair does not pass a current. When the contacts touch, the switch
