The GENx engine represents a giant leap forward in propulsion technology, using the latest materials and design processes to reduce weight, improve performance and deliver a more fuel-efficient commercial aircraft engine. Key to GENx engine's performance are its high pressure compressor, lean-burning combustor and lightweight durable composite materials, including the world's first composite fan case and fan blades for commercial aircraft.

### **The GENx Engine | GE Aviation**

The GENx and the Rolls-Royce Trent 1000 were selected by Boeing following a run-off between the three big engine manufacturers. The GENx uses some technology from the GE90 turbofan, including swept composite fan blades and the 10-stage HPC featured in earlier variants of the engine. The engine carries composite technology into the fan case.. The engine market for the 787 is estimated at US\$40
