Circles - MR. ALLEN

Possible answer: The
Pythagorean Theorem
shows that $x^2 + y^2 = c^2$. It
also shows that $(b - x)^2 +$
 $y^2 = a^2$. Expanding the
latter equation gives

Access Free Lesson 2 Practice B Holt Geometry

$b^2 - 2bx + x^2 = y^2 - a^2$.

Substituting, $b^2 - 2bx + c^2 = a^2$. But $\cos A = \frac{x}{c}$, so $x = c \cos A$. Another substitution gives $a^2 = b^2 + c^2 - 2bc \cos A$. Use the formula you developed in Exercise 5 to find the missing side length in each triangle.
