The Bitcoin Blockchain Following The

The blockchain is a distributed, public ledger that contains the history of every bitcoin transaction. Anyone can download a copy of the blockchain, and it can be inspected to trace the path of bitcoins from one bitcoin transaction to another. It should be noted that while there is a record of every bitcoin transaction ever made, these transactions are not inherently linked to real life identities.

These nodes can be tricked into following a majority of miners who collude to adopt different spending rules. In a situation like the SegWit2x contentious hard fork, a light client user could have been misled into accepting an invalid payment from a fork of the Bitcoin blockchain. Low bandwidth light client users are also more susceptible to a variety of eclipse attacks that are easier to covertly attempt than a miner led hard fork.
